

PARENTAL CONTROLS – IPOD / IPAD / IPHONE

1. From the child's iPod or iPad, go to **Settings > General > Restrictions**.

Prevent Installing & Deleting Apps, In-App Purchases

- Tap “Enable Restrictions” and set a passcode to control access to the restrictions panel
- Under ‘Allow’, toggle the following to OFF: “Installing Apps”, “Deleting Apps”, “Explicit Language”, and adjust other apps and settings as necessary
- Scroll down to “Allowed Content” and flip “In-App Purchases” to OFF

Restrict Inappropriate Content by Age Rating

- Still within the “Restrictions” settings, look under ‘Allowed Content’ and tap on “Music & Podcasts” and turn Explicit to OFF

- Toggle “Movies” and “TV Shows” to age appropriate settings (G and PG are perhaps most common, or consider turning the feature off completely)
- Go to “Apps” and choose age appropriate settings, note that some standard apps like third party web browsers may be rated as “17+” because they could be theoretically used to access adult content
